

Our Response to Climate Change

Climate change is an imminent threat that demands urgent action from all of us. That's why we're working to reduce absolute greenhouse gas emissions from our operations by at least three percent annually, and by at least 26 percent overall, between 2015 and 2025. We're also addressing climate change through our supply chain, by maximizing our use of paper made with recycled or certified wood fiber; our goal is to source paper only from certified sources by 2025. We're also helping our customers better understand their carbon footprints through Avery Dennison Greenprint™, our science-based process for measuring the environmental impacts of the labels, packaging and other solutions we provide.
